

Dolomite®

stop the light

Blackout roller blind with side channels and headbox; with fastener to retain fabric in the channels

FEATURES

- Crank or electric operation
- Excellent wind resistance
- Side channels with integral fastener to encapsulate the fabric
- Easy to install

TECHNICAL

Description: Blackout roller system for domestic or contract use with strong, light excluding side channels. The welded fastener on the fabric assures that it is held captive in the side channels and will not blow out, even in windy conditions.

Installation: The Dolomite® blackout blind is easy to install, as high quality brackets and fittings are used and it has been designed with the installer in mind. Full installation instructions are available and a helpline for technical advice.

Fabrics: Room darkening opaque fabrics with insulating qualities and different degrees of reflection – technical data is available. Many colour shades are offered from white through to black – free urgent sample service for your customer. All fabrics are flame retardant to British and International standards.

Guarantee: 10 years

Drawings: please download from www.aluzion.co.uk

PRODUCT

Application

Contract: for offices, education, hospitality and healthcare.

Domestic: for home cinema and automation schemes.

NOTE: This blind will give around 95% light darkening and is not designed to provide 100% blackout (e.g. for photographic studio use etc). If you are unsure about this please ask to see a sample blind.

Operation: smooth crank handle operation with fixed handle or detachable to prevent unauthorised use of the blind – very popular in schools. Electric versions are very impressive as the powerful motor is

virtually silent in operation.

Sizes: approximate maximum sizes 3.0 metres wide; 3.0 metres high; area 9.0 square metres. Maximum sizes vary according to weight of fabric used. Heavy duty version available to special order which can do larger sizes – please ask for details.

Electric control:

(A) Manual by switch or remote control

(B) Automatic activated by timer, light sensor or heat sensor

Any combination of blinds can be operated as a group, eg all blinds in a room, on a floor level or elevation. For more information please refer to our Technical Sheets.

Dolomite Blinds at Hurstpierpoint College, West Sussex.

SPECIFICATION

Aluzion Blinds can be specified from NBS Source or please contact Aluzion for assistance.

Guarantees for motors and other parts will vary from the main product guarantee. Please ask for details. The Dolomite Blind is manufactured by Aluzion and is available from appointed distributors.
